

3D error geometry: change vs. final norm

Two perturbations start from the same current error $e_\theta(x)$.

$$e_0 = e_\theta(x) = \mathcal{F}_\theta(x) - \mathcal{G}(x)$$

$$e_i = e_\theta(x + \delta_i), \quad i = 1, 2$$

$$\Delta e_i = e_i - e_0$$
